Double-sided roughened copper foil is a kind of copper foil that has been roughened on both the smooth and matte sides to increase the bonding strength and conductivity of the copper foil and other materials. Double-sided roughened copper foil is mainly used for lithium battery negative electrode current collector to collect or release electrons. There are two methods for making double-sided roughened copper foil, one is electrolysis method and the other is rolling method. The electrolytic method is to deposit copper foil on a stainless steel or titanium plate cathode, and then roughen the smooth and matte surfaces. The rolling method is to make copper foil from copper ingots through hot pressing, tempering, cold rolling, pickling, rolling and other processes, and then roughen the surface.
