The global Double Spring Safety Valve market size is predicted to grow from US$ 883 million in 2025 to US$ 1311 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2024, global sales of dDouble Spring Safety Valves reached 960,000 units, with an average selling price of US$890 per unit. A Double Spring Safety Valve is a pressure relief device consisting of two spring-loaded safety valves and a switching mechanism. It is used to ensure continuous safe pressure relief of pressure vessels or pipeline systems when one valve is under maintenance, allowing the other valve to continue operating. Its opening pressure range is typically 0.1–40 MPa, and it is widely used in petrochemical, boiler, power plant, natural gas transmission, and fine chemical plants. Upstream raw materials include stainless steel (304, 316L), carbon steel, chromium-molybdenum alloys, and polytetrafluoroethylene (PTFE) for sealing. Major suppliers include Baosteel, POSCO, JFE, and DuPont. Downstream customers are concentrated in industrial users such as CNPC, CNOOC, BASF, Total, and GE Energy. Total production capacity is approximately 1.5 million units per year, with an industry average gross profit margin of 27%. In upstream material costs, stainless steel and alloys account for approximately 65%, sealing materials approximately 15%, and processing and testing approximately 20%. Downstream consumption comprises the chemical industry (45%), energy equipment (30%), and boiler and pressure vessel manufacturing (25%). Future development focuses on high-temperature, high-pressure durable materials, online monitoring and remote diagnostic capabilities, and integrated safety and energy-saving designs to meet the growing demands of smart factories and hydrogen and nuclear energy equipment.
