The global Double-station Glove Box market size is predicted to grow from US\$ 138 million in 2025 to US\$ 187 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

The double-station glove box is a laboratory equipment with two independent operating spaces, each of which is equipped with a set of gloves so that the operator can perform experiments or operations without direct contact with the external environment. The interior of the double-station glove box is divided into two independent operating spaces, each of which can be controlled separately without affecting each other. The double-station glove box has good sealing performance, which can effectively prevent the outside air, moisture and microorganisms from entering the operating space, ensuring the accuracy and reliability of the experiment or operation. Because it has two independent operating spaces, the double-station glove box can carry out different experiments or operations at the same time, improving work efficiency. For example, materials can be processed at one station and tested or analyzed at another station.

United States market for Double-station Glove Box is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
