Double-station quenching machine, also known as double-station quenching machine tool, is a quenching equipment with two working positions. It is mainly used for surface quenching treatment of shafts, inner holes, end faces, discs and other parts. This equipment is usually used in conjunction with high-frequency induction heating machines, super audio/medium frequency power supplies, etc. to improve quenching efficiency and effect. In addition, the dual-station quenching machine can also select the working state according to actual needs, such as using it as a single-station machine tool, or when the batch of workpieces is large, use the same power supply to draw out two dual-station sensors, and simultaneously The workpiece is clamped and quenched. This flexibility makes the dual-station quenching machine widely applicable in practical applications.
