Double tied expansion joint consists of two corrugated pipes, but unlike the duplex expansion joint, there is no fixed bracket structure connection between the two corrugated pipes. This allows the universal expansion joint to absorb axial, transverse and angular displacements. Its compensation amount is larger than that of a single-wave expansion joint and is often used to compensate for the displacement that a single-wave expansion joint cannot compensate. The duplex tie rod type expansion joint usually has a tie rod distributed around the expansion joint for a stable connection. In 2024, global Double Tied Expansion Joint production reached approximately 773 k units, with an average global market price of around US$ 892 per unit.

United States market for Double Tied Expansion Joint is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
