A Down Tube Battery is a type of battery used primarily in electric bicycles (e-bikes). It is designed to be mounted along the down tube of the bike's frame, which is the diagonal tube connecting the top tube (near the handlebars) to the bottom bracket (near the pedals). This placement provides a balanced and centralized weight distribution, which is crucial for maintaining the bike's stability and handling. These batteries are typically lithium-ion due to their high energy density, lightweight nature, and long cycle life. The down tube design allows for a sleek and integrated appearance, often blending seamlessly with the bike frame. Additionally, this positioning protects the battery from external impacts and weather elements, enhancing durability.

United States market for Down Tube Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
