The global DPF Differential Pressure Sensors market size is predicted to grow from US$ 69.31 million in 2025 to US$ 105 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

In diesel engines, pressure sensors are installed before and/or after the diesel particulate filter (DPF). These filters have an optimum operating temperature at which they can efficiently burn off the fine particles captured by the filter. A drop in pressure signals that the filter is starting to fill up. To prevent clogging and ensure optimal performance, the pressure sensor sends a signal to the ECU to raise the temperature of the exhaust gases and enable the filter to regenerate, thereby preserving the life of these filters.

United States market for DPF Differential Pressure Sensors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
