A digital picture frame is basically a small LCD monitor that's designed to look like a conventional picture frame. Most digital picture frames can be set up in either portrait or landscape orientation, and they can stand on a table or hang on a wall. Like a digital camera, a digital picture frame contains a certain amount of built-in memory and/or a memory card slot that lets you increase the storage capacity as much as you like. The digital picture frame will then 'play' a slide show of its contents.

Global Digital Photo Frame key players include GiiNii, NIX, Aluratek, Micca, Sungale, etc. Global top five manufacturers hold a share over 65%.

North America is the largest market, with a share over 50%, followed by Europe, and Asia-Pacific, both have a share about 40 percent.

In terms of product, Improved 'multimedia' digital photo frames is the largest segment, with a share nearly 45%. And in terms of application, the largest application is Household, followed by Commercial, etc.
