The global DR Portable X-ray Systems market size is predicted to grow from US$ 242 million in 2025 to US$ 331 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

DR (Digital Radiography) portable X-ray systems are advanced, mobile devices used to capture X-ray images for medical or security purposes. Unlike traditional X-ray systems that use film, DR systems employ digital sensors to directly capture and convert X-ray images into digital format, offering higher image quality and faster results. These portable units allow healthcare providers or security personnel to perform X-ray exams in various locations, such as at the bedside, in remote areas, or at security checkpoints. DR portable X-ray systems provide real-time imaging, reducing the need for film development and enabling quicker decision-making and enhanced patient or security outcomes.

United States market for DR Portable X-ray Systems is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
