The drain ball valve is a special ball valve, which is mainly used to control the discharge of liquid in the pipeline system. The drain ball valve realizes the on-off of the fluid by rotating the ball. When the hole on the ball is aligned with the valve body channel, the fluid flows, and when they are misaligned, the fluid is blocked. This valve is usually installed in the pipeline system that needs to discharge liquid. It can effectively control the flow and pressure of the liquid and ensure the safe operation of the pipeline system.
