Drawing fixative refers to a material or spray that is used to protect and preserve drawings or artworks on paper. It is applied as a fine mist or spray to the surface of the artwork, creating a transparent, protective layer.

The main functions and characteristics of drawing fixative include:

1. **Surface Protection:** Drawing fixative creates a protective layer that helps prevent smudging, fading, or discoloration of pencil, pastel, or charcoal drawings. It seals the materials to the paper or surface, reducing the risk of damage or smearing.
2. **Fixation and Preservation:** Fixatives help fix or set the drawing materials in place,

minimizing the risk of accidental smudging or alteration of the artwork. They also help preserve the colors and prevent degradation caused by exposure to light, humidity, or environmental pollutants.

3. Minimal Alteration: Drawing fixatives are designed to be transparent and create a thin, invisible layer on the artwork. They should not significantly alter the appearance or texture of the original drawing.

4. Types of Fixative: There are different types of fixatives available, formulated specifically for different drawing materials. Some fixatives are designed for charcoal or pastel drawings, while others are suitable for graphite or colored pencil works. Artists should select the appropriate fixative based on their specific media and preferences.

Drawing fixatives are commonly used by artists, illustrators, or anyone working with dry drawing media to protect and preserve their artwork. They provide a final layer of protection that helps maintain the integrity and longevity of the artwork.
