The report requires updating with new data and is sent in 48 hours after order is placed.

In the manufacturing industry, drawing search systems register and manage company drawings in a database, enabling quick retrieval based on past data. These systems are predominantly used in sales, design, and procurement departments to streamline the extraction of past drawings. Recent advancements incorporate AI technology, making these systems simpler, more accurate, and user-friendly for searching reference and similar drawings.

Typically, a drawing search system consists of a PC and a database (DB) server or cloud storage. By entering master data such as customer, product, quotation information, and prices during the drawing import process, AI learns from past data, allowing multifaceted immediate searches and significant operational improvements.

Many companies still rely on paper-based drawing storage, leading to issues like lost or bulky drawings that are difficult to locate. Drawing search systems address these challenges.

The global Drawing Search System market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
