The Dredge Control System (DCS) is a specialized automated control system designed for dredging vessels to regulate and optimize dredging operations. Compatible with different dredger types, such as cutter suction dredgers, trailing suction hopper dredgers, and bucket dredgers. Used in various dredging projects, including channel dredging, port construction, land reclamation, and river/lake sediment cleaning.

Core Functions

Real-time operation control: Monitors and adjusts key parameters like dredging depth, suction flow rate, and spoil discharge to maintain operational stability.

Process optimization: Automates workflows such as positioning, excavation, and material transportation to improve dredging efficiency and reduce energy consumption.

Safety and monitoring: Integrates sensors to detect equipment faults, water depth, and environmental conditions, issuing alarms for potential risks.
