Wheat or any other farmed cereal used as food is referred to as a grain. Distiller's grains are cereal by-products obtained from distillation processing units or dry grind ethanol factories, and are available in both dry and wet forms. These grains are used as low-cost feed additives that are manufactured in big quantities. Distillers' grain is an important part of the diet of cattle and poultry birds because it contains enough cereal proteins, fat, minerals, vitamins, fibre, oil, and amino acids. The desalination process produces distillers' grains, which are cereal by-products.
