Abstracts

The global Dried Seaweed market size is predicted to grow from US\$ 7389 million in 2025 to US\$ 12410 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Dried Seaweed refers to dehydrated marine algae such as nori, kelp, wakame and kombu, widely used in snacks, soups, condiments, food ingredients, nutraceuticals and cosmetic formulations. In 2024, the global average price of dried seaweed is approximately US\$3.6 per kilogram, with global dry-weight production reaching around 1.95 million tons. Gross margins generally range from 18%–35%, influenced by cultivation cost, coastal farming density, drying technology, processing grade and export logistics. The supply chain includes upstream seaweed farming, biomass harvesting and primary drying; midstream processors handle roasting, cutting, milling, sterilization and packaging; downstream customers include snack producers, food processors, restaurants, nutraceutical manufacturers, personal care brands and wholesale distributors.

Demand for dried seaweed is rising due to the shift toward healthy snacking, plant-based nutrition and natural umami ingredients. Growth is supported by expanded aquaculture capacity, improved low-temperature drying techniques and the adoption of seaweed extracts in nutraceutical and cosmetic applications. Sustainability and carbon-negative characteristics enhance the long-term value of seaweed, positioning it as a core ingredient in future functional and clean-label food products.
