A drink hose is a specialized type of hose designed for the safe and hygienic transportation of potable water for drinking or cooking purposes.

These hoses are made of food-grade materials, such as FDA-approved plastics or rubber, that do not leach harmful chemicals into the water. Drink hoses are typically used in recreational vehicles (RVs), boats, camping trips, or outdoor events where potable water is required. They are often equipped with fittings and connectors that are compatible with standard water systems, making it easy to connect to a water source or a drinking water storage container. It is important to regularly clean and sanitize drink hoses to prevent bacterial growth and ensure water safety.
