The global Drinking Water Grade Polyaluminium Chloride market size is predicted to grow from US\$ 793 million in 2025 to US\$ 1292 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

In 2024, global Drinking Water Grade Polyaluminium Chloride production reached approximately 1,557.4 K tons, with an average global market price of around 460.5 USD/ton.

Drinking Water Grade Polyaluminium Chloride refers to a high-purity inorganic polymer flocculant, specifically produced to meet strict national and international drinking water treatment standards. It is manufactured using high-quality raw materials (e.g., food-grade aluminum hydroxide) through refined processes including purification, polymerization, spray drying, and rigorous quality inspection, featuring extremely low heavy metal (lead, arsenic, mercury) and impurity content. With excellent solubility, rapid flocculation, and a wide applicable pH range, it effectively removes turbidity, suspended solids, colloids, and partial organic pollutants from raw water via charge neutralization and adsorption bridging mechanisms, ensuring the treated water meets safe drinking standards without introducing harmful substances.

Market demand for Drinking Water Grade Polyaluminium Chloride is driven by the global emphasis on drinking water safety, the expansion and upgrading of municipal water supply facilities, stricter water quality standards for drinking water, and the increasing demand for rural drinking water purification projects. Business opportunities lie in developing ultra-high-purity products that comply with multiple international standards to expand into global markets, optimizing production processes to improve flocculation efficiency and reduce environmental impact in line with green development

policies, and customizing products for specific raw water conditions (e.g., high-turbidity, low-temperature water) to meet differentiated regional needs. Additionally, strengthening certification systems to meet regional regulatory requirements and cooperating with water treatment engineering companies to provide integrated solutions further enhance market competitiveness and development space.
