Drip irrigation valves are pipe fittings that connect the main irrigation pipe to the drip tape/pipe, enabling precise irrigation by controlling the opening and closing of the pipe. Their core functions are regulating water flow, allocating irrigation areas, preventing dripper clogging, and improving water resource utilization. Common sizes are 16mm and 20mm, requiring drilling into the main pipe for installation to suit different irrigation scenarios. Upstream: raw material suppliers (plastic granules, metal filter media, electronic control modules) and technology R&D institutions; Midstream: valve manufacturers and system integrators; Downstream: agricultural growers, cooperatives, and agricultural parks, with end-use scenarios covering field crops, fruit trees, vegetables, and greenhouses.
