## Abstracts

The global Driveaway Satellite Terminals market size is predicted to grow from US$ 1657 million in 2025 to US$ 4822 million in 2032; it is expected to grow at a CAGR of 16.8% from 2026 to 2032.

Driveaway Satellite Terminal is a specialized SATCOM (Satellite Communication) system that is integrated onto the rooftop of a vehicle, allowing users to establish two-way satellite communication links quickly and efficiently. Unlike flyaway systems that require manual unpacking and setup, or manpack terminals that need to be carried and pointed manually, a driveaway terminal can be activated directly from within the vehicle, often through a fully automated satellite acquisition system. The terminal can align itself with the desired satellite and begin transmitting and receiving data, significantly reducing setup time and the need for technical expertise in the field. These terminals are ruggedized and weather-resistant, capable of enduring harsh outdoor conditions such as extreme heat, cold, wind, and rain. Built for both stationary and on-the-pause operations, some advanced models can even provide connectivity while the vehicle is in motion, although most are designed to deploy once the vehicle has stopped. This makes them incredibly useful for field teams that need rapid communication readiness, without the complexity of external setup.

United States market for Driveaway Satellite Terminals is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
