Driver glasses (driving mirrors) are manufactured according to the principle of polarization of light. When the sun is projected on the road or on the water, it directly irritates the eyes, making the eyes glare, tired, and incapable of lasting. Especially when driving a car, it not only affects our work and entertainment mood, but even affects our judgment on the object and causes danger. When driving at night, the high beam of the coming light will cause a black blind spot in front, qualified. The driving mirror at night will greatly reduce the light entering the glasses from the high beam, thus reducing the blind spot in front of it and achieving the purpose of safe driving at night.
