The global Drone Inspection market size is predicted to grow from US\$ 16066 million in 2025 to US\$ 45464 million in 2032; it is expected to grow at a CAGR of 16.0% from 2026 to 2032.

Drone inspection refers to the process of using unmanned aerial vehicles (UAVs) equipped with various high-precision sensors and AI devices to conduct automated or semi-automated patrols, monitoring, and data collection for specific facilities, targets, or areas. Replacing traditional manual inspections, this technology is widely applied in sectors such as electric power, oil and gas, transportation, construction, and agriculture.

This report covers the drone inspection market across sectors including electric power, photovoltaics (PV), wind power, oil and gas pipelines, transportation infrastructure, mining, municipal utilities, and industrial parks. It accounts for revenue generated from drone hardware, payloads, automated docking stations, software platforms, inspection services, and O&M training used for asset inspection, defect identification, thermal imaging, 3D modeling, emergency patrols, and O&M management. It excludes consumer aerial photography drones, agricultural crop-spraying drones, logistics drones, and standalone surveying and mapping services.

In 2025, the global average gross margin for the drone inspection solutions industry is approximately 41%, while the figure for the Chinese market is around 35%. As the market share of automated docking stations, AI-based defect identification, automated inspection platforms, and data services increases, industry gross margins are projected to rise slightly; by 2026, the global average gross margin is expected to reach approximately 43%, with the Chinese market reaching around 37%.
