## Abstracts

The global Drone Wireless Charging In-Flight market size is predicted to grow from US\$ 317 million in 2025 to US\$ 3352 million in 2032; it is expected to grow at a CAGR of 39.6% from 2026 to 2032.

The drone wireless charging in-flight is a low-altitude, non-contact in-flight power replenishment technology specifically designed for drones. Through the coordinated work of the transmitter, airborne receiver, high-precision air-to-ground positioning and alignment unit, and anti-interference telemetry and communication unit, it enables drones to replenish power without physical contact while hovering or cruising at low speeds, completely breaking through the bottleneck of traditional ground charging that requires landing, manual intervention, and interruption of flight.

The global production of drone wireless charging in-flight is projected to reach 715 units by 2025, with an average price of \$454,000 per unit.

United States market for Drone Wireless Charging In-Flight is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Drone Wireless Charging In-Flight is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Drone Wireless Charging In-Flight is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
