Abstracts

The global Drop Metal Detection System market size is predicted to grow from US$ 865 million in 2025 to US$ 1506 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

In 2024, the global production of drop-type metal detection systems will reach 410,000 units, with an average selling price of US$2,000 per unit.A drop metal detection system is a device that automatically removes metal foreign matter from bulk or granular materials (such as food, plastic pellets, and pharmaceutical raw materials) during their free-fall process. Typically consisting of a detection probe, a control unit, and a removal mechanism, this system is highly sensitive in identifying ferromagnetic, stainless steel, and non-ferrous metal impurities, preventing product contamination and equipment damage. It is widely used in quality control and safety assurance for industries such as food processing, pharmaceuticals, chemicals, and plastics.The upstream components of a drop metal detection system primarily include core detection components (electromagnetic probes, coils, signal processing modules), control and drive components (PLCs, pneumatic valves, servo components), structural materials (stainless steel frames, food-grade piping, insulation materials), and electronic components and sensors. The technical level and material quality of these upstream components directly impact the system's sensitivity, stability, and applicable industry standards.

United States market for Drop Metal Detection System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Drop Metal Detection System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
