Drop-on-Demand (DOD) ink refers to a type of inkjet printing technology in which ink droplets are ejected from the printhead only when required, rather than being sprayed continuously. This method contrasts with continuous inkjet systems and offers greater precision and efficiency in ink usage. In DOD systems, the printhead is equipped with either thermal or piezoelectric actuators that generate a pressure pulse, forcing a droplet of ink out of a nozzle only when a specific print signal is received. This technology enables high-resolution printing and is widely used in industrial coding, labeling, and product marking applications, especially on various substrates such as paper, cardboard, metal, plastic, and glass. DOD ink is formulated to meet the specific needs of different industries, offering fast drying times, strong adhesion, and resistance to environmental factors like heat, moisture, and abrasion. Its versatility and reliability make it a preferred choice for packaging, automotive, pharmaceutical, and electronics sectors.
