## Abstracts

The global Drospirenone API market size is predicted to grow from US\$ 78.45 million in 2025 to US\$ 105 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Drospirenone API is a highly selective synthetic progestin steroid active ingredient with anti-mineralocorticoid and anti-androgenic properties, primarily used in combined oral contraceptives and certain gynecological endocrine formulations, and subject to stringent requirements on impurity profiles, polymorphic consistency, and chiral purity. Upstream inputs mainly include steroid starting materials and key intermediates, specialty reagents, and organic solvents, with strict demands on raw-material purity, stability, and supply continuity; downstream customers are international and regional finished-dosage manufacturers with hormone formulation and regulatory capabilities, led by oral contraceptive producers and their generic counterparts. On a global formulation-grade basis, covering both originator and generic markets and measured at manufacturers' ex-works prices, global effective capacity for drospirenone API in 2025 is estimated at around 63 tonnes, with actual sales of approximately 48.6 tonnes and a weighted-average ex-works price of about USD 1,650 per kilogram; supported by complex synthesis, scale-up challenges, and lengthy regulatory pathways, industry gross margins typically range from 44% to 52%, well above those of standard steroid APIs, underscoring its low-volume but high-value, qualification-intensive market positioning.

United States market for Drospirenone API is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Drospirenone API is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
