Fatigue related accidents are the cause of over a quarter of all recorded road accidents. Efforts by various automobile manufacturers and technology providers to reduce sleep/micro-sleep and fatigue related accidents has given rise to drowsiness monitoring system technology. Through sensors placed in different parts of the vehicle, drowsiness monitoring system can detect a driver's drowsiness and fatigue signs and alert him/her to avoid accidents. Different types of drowsiness monitoring systems are presently incorporated in automobiles, which can identify changes in eye or face movements, steering wheel movement, lane movement, and heart rate, among others, and can detect drowsiness of the driver and alert through visual and audio aids. Drowsiness monitoring system has been increasingly adopted by a number of tier-I companies like Audi, Mercedes and Volvo, in their premium segment vehicles. With growing awareness among passengers for better safety features in vehicles, the drowsiness monitoring system market is anticipated to take off in the foreseeable future.
