The drug management system is a digital platform designed for medical institutions, drug manufacturers, drug wholesalers and retail pharmacies, etc., which aims to efficiently and accurately manage the entire process of drug procurement, inventory, distribution, sales and traceability. The system ensures the security and compliance of the drug supply chain by recording and monitoring information such as drug batches, expiration dates, inventory status and sales flows. At the same time, the drug management system usually also integrates data analysis functions, which can generate inventory reports, sales trend analysis, drug usage and reminders of approaching expiration dates, etc., to help managers optimize drug inventory control and procurement decisions, reduce waste and capital occupation. In addition, the system can achieve interface docking with national drug regulatory agencies, comply with drug traceability and regulatory requirements, and improve the transparency and standardization of drug management, thereby better ensuring drug safety.

The drug management system plays an indispensable role in modern medical care and the drug supply chain. It significantly improves the efficiency and safety of the drug supply chain through intelligent management of drug circulation and inventory. With the help of the drug management system, medical institutions and pharmaceutical companies can achieve real-time update and tracking of drug information, ensure the transparency of the entire process from drug production to patient hands, and prevent expired and counterfeit drugs from entering the market. At the same time, the system's inventory warning, intelligent procurement suggestions and data analysis functions help

optimize drug inventory allocation and procurement costs, improve drug availability, and ultimately ensure the safety and timeliness of patient medication. As the digitalization process of the pharmaceutical industry accelerates, the value of the drug management system in meeting compliance requirements, improving operational efficiency and protecting public health will become increasingly apparent.The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
