A drum humidifier is a type of device used to add moisture to the air in indoor environments. It consists of a cylindrical drum-shaped reservoir or container that holds water and a mechanism to disperse the water into the surrounding air. Drum humidifiers are commonly used in residential and commercial settings to increase humidity levels and improve comfort during dry seasons or in dry climates.

Drum humidifiers are relatively simple and cost-effective devices for adding moisture to indoor spaces. However, they are generally recommended for smaller areas or single rooms rather than large spaces.
