A drumstick deboner is a kitchen tool or machine designed to remove the bones from chicken drumsticks while keeping the meat intact. The process of deboning chicken drumsticks can be time-consuming and requires a certain level of skill to do it neatly without tearing the meat. A drumstick deboner simplifies this task by mechanizing the process. The tool typically consists of a metal or plastic frame with a mechanism that holds the drumstick in place while a blade or set of blades removes the bones. The deboner is designed to leave the meat in one piece, which can then be stuffed, flattened, or used in recipes that require boneless chicken.
