Dry Ashing Equipment refers to a category of low-emission thermal processing systems designed to convert organic waste (e.g., agricultural residues, medical waste, biomass, and plastic waste) into ash, heat, and non-toxic gas under reduced oxygen conditions (pyrolysis). Unlike traditional incineration, dry ashing avoids the formation of harmful byproducts (e.g., dioxins, furans) and enables high resource recovery rates. It is widely used in waste management, environmental protection, and agricultural industries, particularly for waste that requires safe, low-emission treatment.
