The dry chemical automatic urine analysis system is a professional urine analysis equipment, which uses the principle of dry chemical analysis for analysis. It is

composed of sample addition, dilution, mixing, reaction, detection, data processing and other parts, with a high degree of automation. , high analysis efficiency and high precision. The working principle of the dry chemical automatic urine analysis system is: the urine sample is firstly pretreated to remove impurities and interfering substances, making the sample more pure. Then, the sample will be added to different reagents according to the preset scheme of the equipment, and the color will change through the dry chemical reaction. After that, the optical detection system is used to detect the absorbance or fluorescence intensity of the sample, so as to calculate the concentration of different components, and finally present it in the data processing system, which has the advantages of fast analysis speed, high precision, and strong reliability.
