Dry chemistry analysis, on the other hand, is based on the reflectance measurement of specific substance at specific wavelength and its comparative study with the standards. Dry chemistry analyzers comprise highly sensitive multilayered reagent coated slides instead of wet reagents. Dry chemistry analyzers are compact and easy to operate, as these do not require storage space for reagents, there is no need for pipetting of reagents, and require small volume of sample. These factors have contributed to high adoption of dry chemistry analyzers in acute care settings, physician offices, etc.
