The dry chemical urine analyzer is a medical laboratory device used to analyze urine samples. This is a highly automated machine that can perform a wide range of tests to evaluate the chemical composition of patients' urine, including glucose, protein, ketones, and pH testing. The machine works by extracting a small amount of urine from a patient and passing it through a series of sensors and detectors. These sensors

measure the chemical composition of urine, enabling the machine to identify and diagnose various diseases, such as diabetes, kidney disease and urinary tract infection. Dry chemical urine analyzer can quickly and accurately analyze a large number of urine samples, making it an important tool for medical laboratories and hospitals. It is used for a wide range of applications, including the diagnosis and monitoring of urinary tract infections, renal function, and metabolic disorders.
