The global Dry Construction Material market size is predicted to grow from US\$ 101930 million in 2025 to US\$ 137250 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

This report studies the Dry Construction Material market. Building material is any material which is used for construction purposes. Many naturally occurring substances, such as clay, rocks, sand, and wood, even twigs and leaves, have been used to construct buildings. Apart from naturally occurring materials, many man-made products are in use, some more and some less synthetic. The manufacture of building materials is an established industry in many countries and the use of these materials is typically segmented into specific specialty trades, such as carpentry, insulation, plumbing, and roofing work. They provide the make-up of habitats and structures including homes. But, dry construction material uses dry materials such as gypsum board, plywood, or wallboard in construction, without the application of plaster or mortar.

Global Dry Construction Material key players include Knauf, Saint Gobain, BaoWu, USG, ArcelorMittal, etc. Global top five manufacturers hold a share about 15%. China is the largest market, with a share about 30%, followed by Europe and North America, both with a share about 20 percent. In terms of product, Gypsum Board is the largest segment, with a share about 60%. And in terms of application, the largest application is Wall, followed by Ceiling, Flooring, etc.
