Dry-cured meat products are a category of preserved meats made by salting and seasoning raw meat, then allowing it to air dry under controlled conditions. This method removes moisture from the meat, inhibiting the growth of bacteria and preserving it for an extended period. Common examples include prosciutto, salami, and bresaola. The process typically involves curing with salt and sometimes other seasonings, followed by a period of fermentation and aging. The result is a flavorful, often savory product with a dense texture and concentrated taste.
