Diamond saw blade is a cutting tool that is widely used in the processing of stone, ceramics and other hard, brittle or abrasive materials. Diamond blades are made up of two components: the steel core and the segment (diamond crystals and a bonding system). The core is typically a round flat metal disc used to support the outer segments. The diamond can be attached to the core using vacuum brazing, sintering, or laser welding. Dry-cut diamond saw blade refers to the saw blade used without water cooling, which is suitable for cutting harder materials, such as masonry, ceramics, granite, marble, etc. Its cutting speed is fast, but it is easy to produce dust, and the saw blade is easy to wear.
