Dry film lube mold release agent is a mold release material that forms a uniform, solid, and extremely thin dry coating on the mold surface. It is mainly used in the molding process of thermoplastic, thermosetting resin, rubber, composite materials, polyurethane and other products to prevent the products from adhering to the mold and improve the demolding efficiency. Unlike traditional oily or solvent-based mold release agents, dry film mold release agents quickly dry to form a solid film after spraying or brushing. It is not easy to transfer and does not pollute the surface of the product. It is suitable for scenes with high requirements for surface cleanliness and subsequent processing (such as painting and bonding). Its advantages include many demolding times, long service life, and good surface consistency of finished products. It is widely used in high-standard manufacturing industries such as automotive parts, electronic packaging, aviation composites, tires, and shoe molds.
