Abstracts

The global Dry Fog Humidifier market size is predicted to grow from US$ 3921 million in 2025 to US$ 7194 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

A dry fog humidifier is a humidification device that uses high-frequency oscillation or high-pressure airflow to atomize water into extremely fine particles (typically less than 10 micrometers in diameter). Its characteristic is that the droplets evaporate rapidly in the air, without forming visible water mist or water droplet deposition, hence the name "dry fog." Dry fog humidifiers have advantages such as high humidification efficiency, low energy consumption, no water stain pollution, and strong applicability to environments with high cleanliness requirements. They are widely used in environments requiring precise humidity control, such as electronics manufacturing, printing, textiles, food processing, laboratories, and data centers.

The dry fog humidifier industry chain mainly includes three segments: upstream, midstream, and downstream. The upstream involves the supply of key components such as ultrasonic oscillators, nozzle assemblies, high-pressure pumps, sensors, and air filters, as well as basic materials such as metals, ceramics, and plastics. The midstream involves the research and development, design, assembly, and system integration of dry fog humidifiers. At this stage, companies improve product performance and added value through technological innovation (such as atomization particle size control, intelligent humidity adjustment, and energy-saving algorithms). The downstream is mainly used in scenarios with strict humidity and cleanliness requirements, such as electronics manufacturing, precision machining, data centers, agricultural greenhouses, pharmaceutical workshops, and high-end commercial spaces. The industry's overall gross profit margin is around 35%.

In 2024, global production of dry fog humidifiers reached 14.34 million units, with an

average selling price of $260 per unit. A single production line had a capacity of 300,000 units per year.

United States market for Dry Fog Humidifier is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
