The global Dry Gas Seal Control System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Dry gas seal control system is a sealing system used for rotating equipment (such as centrifugal compressors, pumps, etc.) to prevent gas or liquid leakage and maintain pressure balance inside and outside the equipment. Dry gas sealing control systems usually consist of dry gas sealing devices, sealing control panels, sensors, air source units and other components. The working status of the sealing system is monitored and adjusted through the control panel to ensure that the equipment does not leak when rotating at high speed. This sealing system is suitable for equipment under harsh working conditions such as high temperature, high pressure, corrosive media, etc. It improves the reliability and safety of the equipment, extends the service life of the equipment, and reduces maintenance costs.
