## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The report mainly focuses on dry ice clean machine and production machine.

Dry ice production machine is used to produce dry ice. Dry ice is made from carbon dioxide gas. The carbon dioxide gas is pressurized and cooled to form liquid CO<sub>2</sub>. The liquid carbon dioxide is injected into either a block press or pelletizer. These dry ice production machines have chambers in which, once released to atmospheric pressure, the liquid carbon dioxide converts to dry ice snow and carbon dioxide gas. The carbon dioxide gas is recovered and converted back into liquid carbon dioxide.

Dry ice clean machine, where dry ice, the solid form of carbon dioxide, is accelerated in a pressurized air stream and directed at a surface in order to clean it.
