A dry ice pack is a cooling solution that utilizes dry ice, the solid form of carbon dioxide, to maintain extremely low temperatures during the transportation or storage of perishable items. Dry ice is exceptionally cold, with a temperature of about -78.5 degrees Celsius (-109.3 degrees Fahrenheit), and sublimates directly from a solid to a gas without transitioning through a liquid state. Dry ice packs are commonly used for shipping and preserving items that require deep freezing, such as medical supplies, pharmaceuticals, and certain food products. The dry ice is typically enclosed in a specialized pouch or container, allowing for controlled sublimation and the generation of a consistent and intense cold environment. The absence of liquid water in the dry ice pack makes it particularly suitable for situations where moisture control is crucial, preventing damage to sensitive goods. However, careful handling is essential, as direct contact with skin can cause frostbite due to the extremely low temperatures involved.

The global Dry Ice Pack market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

The market for dry ice packs is currently witnessing steady growth, driven by the increasing demand for reliable and ultra-low-temperature cooling solutions, particularly in the pharmaceutical, medical, and food industries. Development drivers include the expanding global cold chain logistics for transporting temperature-sensitive goods and the critical need for maintaining specific temperature ranges to ensure the integrity and safety of products. The COVID-19 pandemic has further accentuated the importance of effective cold chain solutions for vaccine distribution. Obstacles in the market include the challenges associated with handling dry ice, such as the need for specialized packaging and safety precautions due to its extremely low temperatures. Additionally, the environmental impact of carbon dioxide emissions during dry ice production and transportation is a consideration for sustainability-conscious industries. Future development trends are likely to involve innovations in dry ice pack designs, improved insulation materials, and advancements in manufacturing processes to enhance efficiency and reduce environmental impact. As the demand for reliable cold chain solutions continues to rise globally, driven by the growth of e-commerce and the need for preserving the quality of sensitive products, the market for dry ice packs is expected to evolve with a focus on safety, sustainability, and enhanced performance.
