CO₂ snow blasting is a process for the purpose of cleaning and pretreating surfaces. It uses the supply media liquid CO₂ and compressed air. The abrasives are CO₂ snow particles of dry ice which are produced from liquid CO₂ in CO₂ snow blasting units.

Such a unit has a relatively simple design. For the liquid CO₂ supply, it is possible to either use a low-pressure CO₂ tank or a CO₂ cylinder or bundle of cylinders with a riser tube. Compressed air is supplied by the on-site network or a screw compressor. Electricity supply is not required. The cleaning or pretreatment is carried out in a dry, residue-free and environmentally sound manner.

The CO₂ snow blasting method is used for the cleaning and pretreatment of solid surfaces. In addition, it can also be used for separation, deburring and cooling. CO₂ snow blasting offers high flexibility in application and is used, amongst others, for the following impurities: particles, dusts, greases, oils, fingerprints, separating agents, face coatings, product residues, adhesive and glue deposits, polishing agent residues, anti-corrosive agents and cooling lubricants, bitumen, waxes, varnish particles and thin paint layers, gunpowder residues, fluxing agent deposits, carbon black, lime as well as germs and fungi.
