Dry lubricating oil is a dry film lubricant prepared by mixing non-flammable fluorine solvent with perfluoropolyether oil and ultra-low molecular weight polytetrafluoroethylene (PTFE) particles, and adding additives such as heat resistance and corrosion resistance. After drying, this quick-drying lubricant forms a uniform lubricating film on the working surface, which has the characteristics of no dust, low torque, high and low temperature resistance, no oil splashing, and noise reduction, and solves the diffusion and pollution problems of traditional oily lubricants.
