A dry milk powder metal detector is a specialized inspection system used in the food industry to detect and remove metal contaminants from dry milk powder products. This type of metal detector is an essential quality control tool to ensure the safety and integrity of the milk powder before it reaches consumers.

The dry milk powder industry, like the broader food processing sector, is subject to increasingly stringent food safety regulations worldwide. Governments and regulatory bodies are placing greater emphasis on ensuring that food products, including milk powder, are free from metal contaminants. This has driven the demand for high-quality metal detection systems to meet compliance requirements.
