The global Dry Mixed Mortar Mixing Equipment market size is predicted to grow from US\$ 652 million in 2025 to US\$ 1001 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2024, global Dry Mixed Mortar Mixing Equipment production reached approximately 8050 units, with an average global market price of around K US\$ 78 per unit. Dry Mixed Mortar Mixing Equipment is a mechanical device specifically designed for producing dry mixed mortar. Dry mixed mortar is a building material made by mixing various fine aggregates, cementitious materials, fillers, additives, etc. in a certain proportion. It is usually used on construction sites by simply adding water and stirring. The dry mixed mortar mixing equipment can automatically complete the processes of measuring, mixing, storing, and packaging these materials.

The market for dry mixed mortar mixing equipment is closely related to the green transformation of the construction industry and the growing demand for standardized construction. Environmental policies are driving the shift from on - site mixed mortar to factory - produced dry mixed mortar, stimulating equipment upgrades towards high efficiency, energy saving, precise batching, and low dust emissions. Technologically, it focuses on modular design to meet the needs of producing various types of mortar, while intelligent control systems improve batching accuracy and production efficiency. In the future, with the promotion of prefabricated buildings and the expansion of the old - house renovation market, dry mixed mortar equipment will develop towards multi - functional integration and provide remote operation and maintenance services through Internet of Things technology. However, the industry faces challenges such as the cost pressure of equipment renewal for small and medium - sized enterprises and homogenized competition in the high - end market, and emerging markets (such as

infrastructure projects in Southeast Asia and Africa) will become the main drivers of demand growth.
