The global Dry Offset Printing Presses market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A dry offset printing press is a type of printing machine that uses a combination of offset and flexographic printing principles. Unlike traditional offset printing, which requires a dampening unit to maintain a water-based balance on the plate, dry offset presses utilize a silicone blanket that acts as both a transfer and pressure medium. This eliminates the need for water-based dampening, reducing waste and environmental impact.
