One of the primary factors leading to inhalation capsules' adoption is their quick onset of action. Unlike oral drugs, which need to pass through the digestive system, inhalation permits the drug to be directly absorbed into the circulation via the respiratory system. This leads to faster therapeutic effects, making inhalation capsules especially useful in instances when a speedy reaction is required, such as emergency treatments or treating acute symptoms. Furthermore, inhalation capsules are ideal for elderly and pediatric patients since they avoid the difficulties associated with ingesting pills or tablets. Inhalation may be a more appealing and less threatening way for children to take medicines.
