A dry steam cleaner is a cleaning device that uses high - temperature, low - moisture steam to clean and disinfect various surfaces. The dry steam cleaner heats water to a high temperature to produce steam. The unique design of the device allows the steam to have a low moisture content, usually with a dryness level of over 90%. This dry steam can effectively penetrate dirt, grease, and stains on the surface, softening and loosening them, making it easier to wipe clean. At the same time, the high temperature of the steam can kill most bacteria, mites, and mold, achieving a disinfection and sterilization effect.

In commercial applications, the hospitality, healthcare, and food industries have a high demand for dry steam cleaners. The hospitality industry, in particular, uses them to clean carpets, garments, and various surfaces to maintain high - standards of hygiene. In industrial applications, dry steam cleaners are used to clean equipment, machinery, and workshop floors. They can quickly remove grease and dirt and have a disinfection and sterilization effect, improving production efficiency and ensuring a clean production environment. With the improvement of living standards, people are increasingly concerned about home hygiene and environmental protection. Dry steam cleaners, which are environmentally - friendly and chemical - free, are favored by more and more consumers. They can be used to clean floors, furniture, kitchen utensils, and bathrooms, effectively removing dirt and bacteria and creating a healthy home environment.
