Dry Wire Drawing Machine is a mechanical equipment used for cold processing of metal wires (such as steel wire, copper wire, aluminum wire, etc.). It gradually draws thick wires into thinner wires through a die to achieve the required diameter and surface finish. Its characteristic is that no lubricating fluid is used during the drawing process, but it is cooled by air or air flow. It is suitable for drawing non-ferrous metal wires such as copper and aluminum, and is widely used in construction, automobiles, electricity, aerospace and other industries.
