Drylaid nonwoven fabric is a nonwoven material made by dry web technology. It uses processes such as direct fiber laying and reinforcement, without the need for spinning and weaving processes, so it has the characteristics of high production efficiency, low cost, and flexible process. The fibers of drylaid nonwoven fabrics are arranged randomly or directional to form a three-dimensional mesh structure with good air permeability, moisture absorption, filtration and softness. It has a wide range of applications and can be used to make medical supplies (such as masks, surgical gowns), sanitary products (such as diapers, sanitary napkins), household products (such as rags, wipes), industrial products (such as filter materials, insulation materials), etc. Drylaid nonwoven fabrics are not only environmentally friendly and degradable, but also can achieve different performance and uses by adjusting the fiber type, specifications and processing technology according to different needs. With the advancement of technology and market demand, the application of drylaid nonwoven fabrics in various fields will be more extensive and become one of the indispensable materials in modern life.
